Perhaps of interest to those teaching first-year courses:

Teaching Legal Analysis Using the Unified Field Theory, by Howard E. Katz

The “unified field theory of legal analysis” method draws on learning theory as well as the experience of professors, especially those who teach element-driven courses (e.g. criminal law and torts). It emphasizes rules, and elements that comprise those rules, as the fundamental organizing principal of how to do legal analysis. This applies to what is done in class, where step-by-step articulation of elements, and application of facts to those elements, is emphasized rather than cases and court opinions as such. The method embeds a variety of sound pedagogical techniques. By “flipping the cases” in class (covering rules first, then applying facts) every case covered in class can be used as a formative assessment exercise. The goal is to connect what goes on in class on a day-to-day basis with what is expected of the students on a final exam: a good answer to a fact pattern-based, issue-spotting essay question. A draft is posted on my ssrn site:
